CN51 Device

Scanning Flasks

There are two buttons which can be used to scan flasks – these are circled in red to the right.

The device will vibrate and make a beep sound on a successful scan.

Device Keypad

- **A & B** - If the orange (A) or green (B) keys are touched an orange or green LED light will display towards the bottom of the keypad.

Tap the orange or green button to have full function of the keypad again

- **C** - Power device on and off
- Use  to move to the next bail when recording animal IDs in the app

Unlocking the device

- Swipe padlock symbol upwards

EZ Link App

Logging in

1. Enter your participant code.

If you are unsure of your code refer to the sticker on device or EZ Link box.

2. Select 'Sign In'.

Home page

- Green tick indicates an action is complete
- If a field is greyed out (e.g. Record AM) it indicates the test setup is incomplete or the previous session does not have any animals recorded in it.
- Shows how many animals are recorded in each session
- Review
 - o Look up and edit sampled animals
- Query Flask
 - o Scan flask to find out which animal it is allocated to
- Logout
 - o At end of session

Test setup

1. Fill out mandatory fields
 - Previous cups on date
 - Previous cups on time
2. Optional settings
 - Enable EID wand - Yes/No
 - Alternate scan - On/Off (herringbone only)
 - o On - Enter animal ID, scan flask, enter animal ID, scan flask
 - o Off - Enter all animal IDs in the row, then scan all flasks in the row

3. Select  to save your changes

Herringbone

Record - Alternative Scan ON

Enter animal ID, scan flask, enter animal ID, scan flask

1. Enter animal ID
2. Scan flask
3. Blue flask  indicates successful scan
4. Continue entering animal IDs and scanning flasks until end of row
5. Select  ADD EXTRA BAIL if there is an extra animal to record in the row
6. To finish row scroll to bottom of record screen and select 
7. **NEW** - When finished session select  to go back to home screen
8. Select 'Logout'

Record - Alternative Scan OFF

Enter all animal IDs in the row, then scan all flasks in the row

1. Enter all animal IDs in the row
2. Select  ADD EXTRA BAIL if there is an extra animal to record in the row
3. Select 
4. Scan all flasks in row
5. Blue flask  indicates successful scan
6. To finish a row, scroll to bottom of record screen and select 
7. **NEW** - when finished session select  to go back to home screen
8. Select 'Logout'

Reverse record/scan

Select  to change bail numbers from ascending to descending

If	Then
Alternative scan ON	Select before entering first animal ID in row
Alternative scan OFF	Select before entering any animal IDs or before scanning any flasks

Herringbone

Add missed animal (Alternative Scan OFF)

A missed animal can be added while recording animal IDs in a herringbone shed

1. Tap on the bail where the missed animal should be
2. Tap 'Add missed animal'

This action moves all animals entered down one bail

Add missed flask (Alternate scan OFF)

1. Tap on the 3 dots in top right hand corner of record screen
2. Tap 'Add Missed Flask'
3. Scan back through flasks until missing flask is located
4. **NEW** - when missing flask is found users will be prompted to scan remaining flasks in the row

Please note: This process has changed to improve accuracy of data and efficiency within the app and is now only available for herringbone sheds not using alternate scan.

Short row - skip all remaining empty bails

1. Scroll to bottom of record screen
2. Select **SCAN FLASKS**
3. Confirm by selecting 'Begin scanning' on warning

Warning

Skip the remaining 14 bails and begin scanning?

CANCEL **BEGIN SCANNING**

Clear flasks

1. Tap on the 3 dots in top right hand corner of record screen
2. Select 'Clear Flasks'
3. All flasks scanned in row will be cleared

Clear Row (Animal ID & Flask)

4. Tap on the 3 dots in the top right hand corner of record screen
5. Select 'Clear Row'
6. All animal IDs and flasks in row will be cleared

Rotary

Record

Enter animal ID, scan flask, enter animal ID, scan flask

1. Enter animal ID
2. Scan flask
3. Blue flask  indicates successful scan
4. Continue entering animal IDs and scanning flasks until end of session
5. **NEW** - when finished session select  to go back to home screen
6. Select 'Logout'

Reverse record/scan

Select  to change bail numbers from ascending to descending – Must be selected before any animals are recorded in the session.

Slow milking animal

If	Then
Animal goes around rotary with no change of flask	<ul style="list-style-type: none"> • Skip the bail or • Record the animal and flask again – EZ Link will recognise the animal as a slow milker
Animal goes around rotary and flask is changed	<ul style="list-style-type: none"> • Duplicate animal screen will appear with option to record second flask as overflow <p> Mark as overflow</p>

Herringbone & Rotary

Enter animals

- Enter animal ID using keypad on device
- Press  on keypad to move to the next action
- To record a Birth ID tap the button circled in red to the right
- The format for recording Birth IDs is PTPT-YY-XXX
 - o Example: PDGY-17-123
 - o The dash in between fields automatically generates - users do not need to add it
- The participant field is pre-filled with the herd's participant code, to remove this use the  button on the device keypad

Enter animal ID via EID wand - supplied by LIC

1. Enable EID wand in Test Setup by changing from No to Yes
2. Select 
3. Go back into either 'Record AM' or 'Record PM'
4. Tap  in top right hand corner of record screen to enable EID wand
5. Icon will change when EID wand is connected 

Edit animal ID

1. Tap on the bail with the animal ID you wish to edit
2. Select Edit animal ID
3. Use the  button on the keyboard to remove the incorrect number
4. Re-type correct animal ID
5. Select SAVE

Animals unknown to MINDA

- Herd details are pre-downloaded into EZ Link from MINDA
- Animals not recorded in MINDA will show with  symbol
- Duplicate animals designated with animal IDs of 10,001 or higher will also display with  symbol
- Animals unknown to MINDA can be viewed and edited in the review screen

Herringbone & Rotary

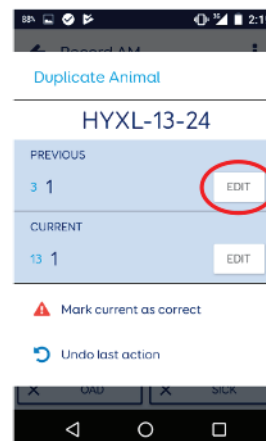

Duplicate animals

If a duplicate animal is recorded the screen to the right will display

- Select 'EDIT' to change an animal ID
- If you mark current as correct the incorrect animal will display with 10,000 in front of the ID.

For example: If there is a duplicate of cow 50, the incorrect animal will display as 10050

- Animals marked as duplicate will show as 'Unknown to MINDA' 
- If the duplicate is in the same bail users will be given the option to record an overflow flask
- Duplicate animals can be viewed and edited in the review screen

OAD animals

There are two ways to record OAD animals

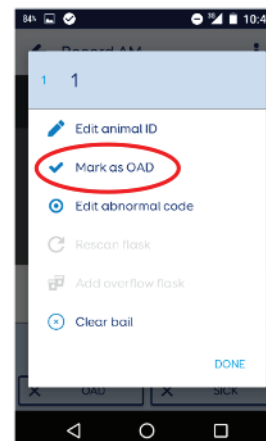

1. Tap on the OAD button once to mark one animal as OAD
 2. Tap on the OAD button twice to record multiple animals as OAD - icon will display with lock symbol  OAD
- To turn off OAD, tap again

Or

1. Tap on animal ID to bring up edit options
2. Select 'Mark as OAD'

To **unmark** as OAD

1. Tap on animal ID to bring up edit options
2. Select 'Unmark as OAD'

Sick Animals

There are two ways to record an animal as sick

1. Tap on the SICK button once to mark one animal as sick
 2. Tap on the SICK button twice to record multiple animals as sick - icon will display with lock symbol  SICK
- To turn off SICK, tap again

Or

Follow the steps for Adding/Editing an abnormal code on page 10.

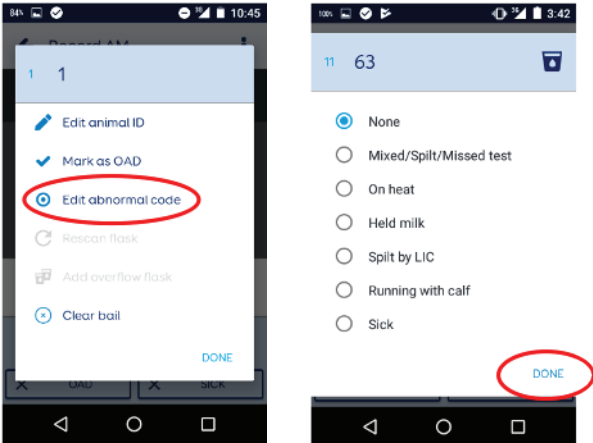

Herringbone & Rotary

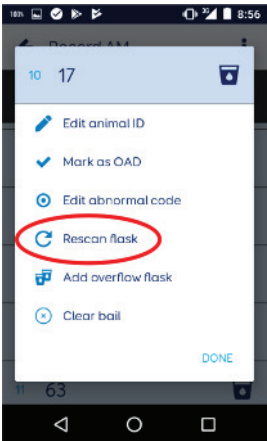

Adding/Editing an abnormal code

1. Tap on animal ID to bring up edit options
2. Select 'Edit abnormal code'
3. Select appropriate abnormal code
4. Select 'DONE'

Re-scan flask

1. Tap on animal ID to bring up edit options
2. Select 'Re-scan flask'

Duplicate flask

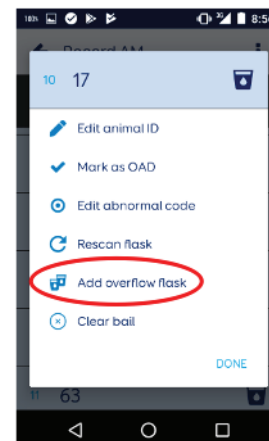

If	Then
The duplicate flask is in the same row (herringbone) or rotation (rotary)	Users are given the below options <ul style="list-style-type: none">Rescan previous flaskRescan current flaskMark samples as mixedUndo last action
The duplicate flask is NOT in the same row (herringbone) or rotation (rotary)	Users are given the below options <ul style="list-style-type: none">Rescan current flaskMark samples as mixedUndo last action

Herringbone & Rotary

Overflow flask

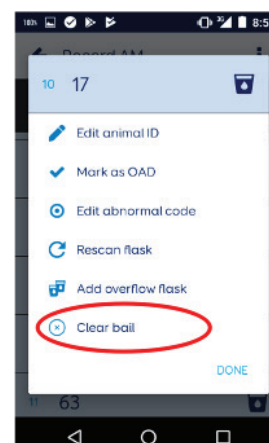

There are 3 ways users can record an overflow flask

1. Tap on animal ID to bring up edit options - select Add overflow flask
2. In a rotary if an animal goes around twice a pop-up will show she is a duplicate and users will be given the option to mark second sample as overflow
 Mark as overflow
3. Review screen - tap on animal ID - users will be given the option to add overflow flask for either the PM or AM session

Clear Bail (Delete animal and flask)

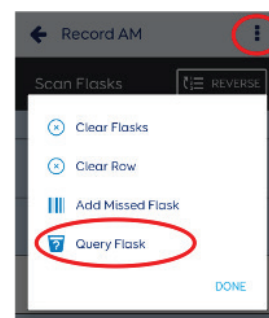

1. Tap on animal ID to bring up edit options - select clear bail
2. User will be asked to confirm
3. Animal ID and flask will be deleted

Query flask

Use when uncertain whether a flask has been scanned

1. Find query flask on home screen or tap on 3 dots in top right hand corner of record screen
2. Select 'Query Flask'
3. Scan the flask in question
4. Animal ID of linked flask will display - or will display 'no record found'
5. User is then able to scan another flask (if required)

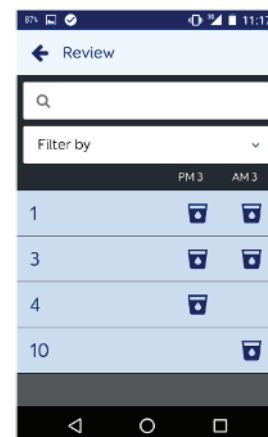

Review

NEW – users are now able to review throughout a milking session

- Search by entering animal ID next to 
- Edit by tapping on the animal ID
- Users can filter by the following:
 - o Duplicate animals
 - o Unknown to MINDA
 - o No calving date
 - o Single-sample animals
 - o Lactating animals not sampled
 - o OAD
 - o Abnormal code animals.
