(If you are unsure of your code refer to the sticker on device or EZ Link box).
4. Select Test Setup
5. Fill out mandatory fields
 - Previous cups on date.
 - Previous cups on time.
6. Use optional settings (if required).
 - Enable EID wand.
 - Alternate scan - On/Off (herringbone only).
 - Select button to save your changes.

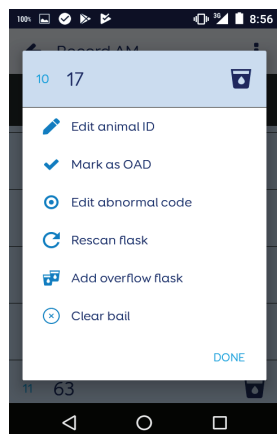

Rotary

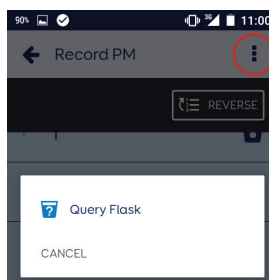

- Select to change bail numbers from ascending to descending.

(Can only be selected before entering first animal in session).

- Tap on the bail to bring up below options:

- Select the three dots in top right hand corner to display the following options:

NEW - When finished session select to go back to home screen and LOGOUT (there is no END SESSION button).

Herringbone

- Select  to change bail numbers from ascending to descending.

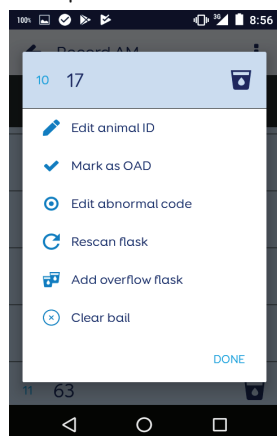

- Alternative scan ON - select before entering first animal ID in row.
- Alternative scan OFF - select before entering any animal IDs or before scanning any flasks in row.

- Select  to add an extra bail.

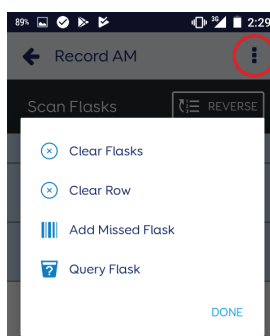

- Select  after entering all animal IDs. (Alternative scan off).

- Select  after scanning flasks to start a new row.

- Tap on the bail to bring up below options:

- Select the 3 dots in top right hand corner to the display following options:

UPDATE - Add missed flask

When a missing flask is found, users will be prompted to scan remaining flasks in the row.

This process has changed to improve accuracy of data, efficiency within the app and is now only available for herringbone sheds not using alternate scan.

- **Short row** - skip all remaining empty bails.

- Scroll to bottom of record screen.
- Select  or 
- Confirm by selecting "Begin Scanning" or "Complete Row" on warning.

NEW - When finished session select  to go back to home screen and LOGOUT (there is no END SESSION button)
